Course

Fundamentals of Sustainable Infrastructure
CVEN9898 │ 6 Units of Credit

Overview

The course provides a theoretical background to the sustainability aspects of water and waste management, transport services, energy supply and distribution. The theory will then be applied to the analysis and design of sustainable infrastructure case studies, involving economic, resource and population constraints.

It provides a regional planning context to the planning and design of infrastructure and provides a series of case studies to illustrate the principles of sustainable infrastructure design.

DISCLAIMER
Please note that the University reserves the right to vary student fees in line with relevant legislation. This fee information is provided as a guide and more specific information about fees, including fee policy, can be found on the fee website.

For advice about fees for courses with a fee displayed as "Not Applicable", including some Work Experience and UNSW Canberra at ADFA courses, please contact the relevant Faculty. Fees for courses delivered through UNSW Global are published and charged by UNSW Global and thus appear as "Not Applicable" on this site.

Where a Commonwealth Supported Students fee is displayed, it does not guarantee such places are available.
