'The Computational Design Theory II course builds on the foundational knowledge of CODE1110 – Computational Design Theory I, that introduced students to computational thinking and methods in the context of the architectural discipline and practice, to investigate historic and contemporary approaches to representing, conceptualising, and designing the built environment in relationship to digital culture and computing technologies. Students will develop and apply advanced critical thinking skills to analyse relationships between digital culture and the built environment and apply conceptual and theoretical ideas to interpret and explain their findings. This course explores and advances the ethical application of digital and computational technologies to inform the student’s own design practice.
